Evaluation of each child's behavior, level of functioning, and presence of mental retardation or Developmental Disability:

Elisha was speech delayed but received treatment and is much better. He is a very friendly child and plays well with others. MO thought he would suffer from separation anxiety but so far he has DDPS000168

Post-Removal Staffing Form

3

not had any problems in placement.. MO thought Elisha would beat his head on the floor after a few days because he would be missing her.

Katelynn is a very smart child who loves to count. She likes to play and loves Dora the Explorer. There does not appear to be any developmental delays in Katelynn.

Child's Name

Observations and opinions of the primary substitute caregiver for each child:

Elisha T. Allen is an active child appears to have been responsible for his sister. The caregiver said that someone has been hitting the children because Elisha was about to hurt his sister and she raised her voice (out of fear) to say NO and they both ducked and covered their heads. She said she had to sit and talk to them and tell them that she was not going to be hitting them, that no one would be hitting them.

Katelynn is a smart child who is very dependent on her brother. She has adjusted well to the placement and is enjoying being in the school / daycare.

Worker's impressions on each child:

The children were friendly and smart. They did not have a problem being placed at all. They walked into the foster home and said we like your house and started playing. The children are craving attention and love.

I did not see a bond with the grandmother. When she asked them for a hug when we were getting ready to leave both children looked away from the grandmother as she tried to hug them she asked Elisha to look at her and made him promise to take care of his sister.
